## The big bang theory... what went bang?

Sun, 10th Dec 2006

### Question

Andy on the A120

The big bang theor

### Answer

That's a good question. Well the answer strangely enough is nothing... This point I mentioned briefly before about zero. If you think of nothing, nothing is a balance between a big positive and a big negative. And if occasionally that little balance comes off, you go from nothing to something, very quickly indeed, and you get an awful lot of something in a very small place. And so in a very real sense of the word, the big bang sprang out of nothing.

# **Stephen Hawking: God did not create Universe**

**The Universe can create itself from nothing, says Prof Hawking**

He had previously argued belief in a creator was not incompatible with science but in a new book, he concludes the Big Bang was an inevitable consequence of the laws of physics. ..

Britain's most famous physicist sets out to contest Sir Isaac Newton's belief that the universe must have been designed by God as it could not have sprung out of chaos...

He adds: **"Because there is a law such as gravity, the universe can and will create itself from nothing.**

**"Spontaneous creation is the reason there is something rather than nothing, why the universe exists, why we exist.**

had been created spontaneously from  
nothing”**
